This was a project for Aquent in which I worked with a developer who provided me with raw data for technical testing for a proprietary online testing system Aquent had acquired.

I did the technical editing and then reviewed with the developer. The goal was to ensure the interface was user-friendly, clear in its directions and each step of the test fit within the software's designated display window.

After reviewing with the developer we conducted QA and escalated any issues to the team in India that developed the software.

CSS-FUNDAMENTALS-QUESTIONS ✕

Showing **1** - **5** questions (total **18** questions)   **3** question(s) are selected.

☐   Q.1   **CSS IDs and Classes**

Objective:

This challenge will demonstrate your understanding of how to target IDs and classes in CSS.

Action:

In the HTML file provided there are several paragraphs. One has an ID and the other paragraphs have classes. You will write CSS that targets those elements to apply the correct style.

- In the file **index.css** make the following changes:
    - Write CSS to make the element with the ID **main** have a background that is **yellow**
    - Write CSS to make any element with the class **blueText** have text that is **blue**
    - Write CSS to make any element with the class **redText** have text that is **red**

NOTE:

- Access **index.css** in the CSS tab
- <u>Do not</u> make changes to the HTML on the page
- <u>Do not</u> create any new elements on the page
- When applying color in your CSS, use the exact values provided
- <u>Do not</u> use CSS shorthand
- For each action item, write a single line of CSS that sets the correct property and value
